# TURBO BASKET MILL

## "TURBO BASKET MILL"

Basket mill is a highly efficient batch milling system. In which integrated pins pumping the beads and circulates the millbase through the basket screen.

The milling basket should be double-walled for cooling dissipation and has a screen that retains the milling beads but allows the flow of millbase to pass through.

The efficient circulation of the millbase through the basket ensures excellent milling/grinding results in a short period of time

## "TURBO BASKET MILL 37KW"

Highly efficient and robust basket mill technology for excellent fine grinding results

- Excellent grinding results in a short time
- Repeatable grinding results
- Uniform average residence time
- Narrow particle size distribution
- No dead areas due to effective mill base circulation
- No escape of milling beads during the fine milling process
- Fine milling in a closed system
- No Pumps, no hose and no mechanical seal involved
- Low energy requirement
- Simple cleaning and quick change of millbase
- Especially user-friendly and monitoring milling system: very simple and safe handling
